

The ANEMASTER

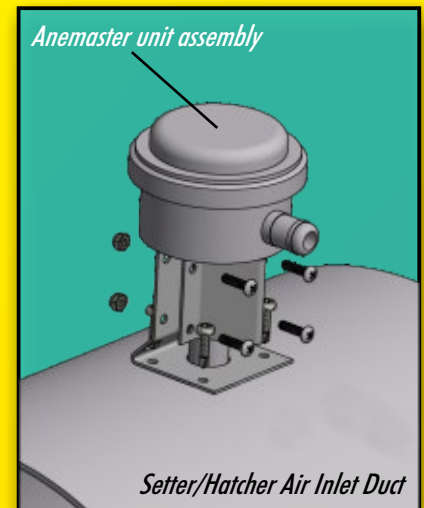

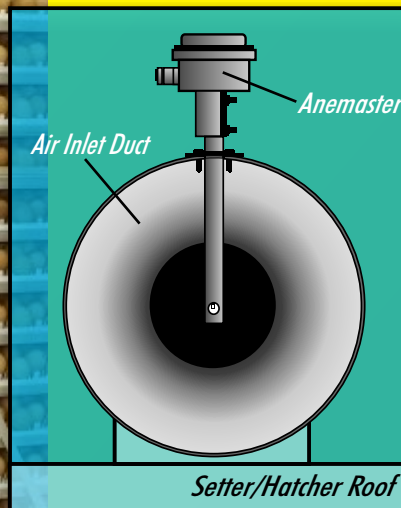

'The Most Significant Upgrade for for Setters and Hatchers Ever!'

The Anemaster is the newest feature for new Chick Master setters and hatchers for both single and multistage applications. Adding the Anemaster gives greater control over the incubation process by providing precise information about the volume of air going to the incubation equipment. What does airflow information give you?

The ability to:

- Measure the air velocity thru each setter and hatcher from setting to hatch
- Reduce the energy consumption by using and preparing the air that is needed
- Improve the hatch window for greater chick quality and consistency
- Manage room ventilation based on the exact need of the incubators
- Combine with **Maestro** to get even more information resulting in a better hatch, more chicks, at a lower cost

Another great innovation from Chick Master to give your hatchery superior results.
