More Chicks, Better Chicks, Lower Cost, Greener Environment.

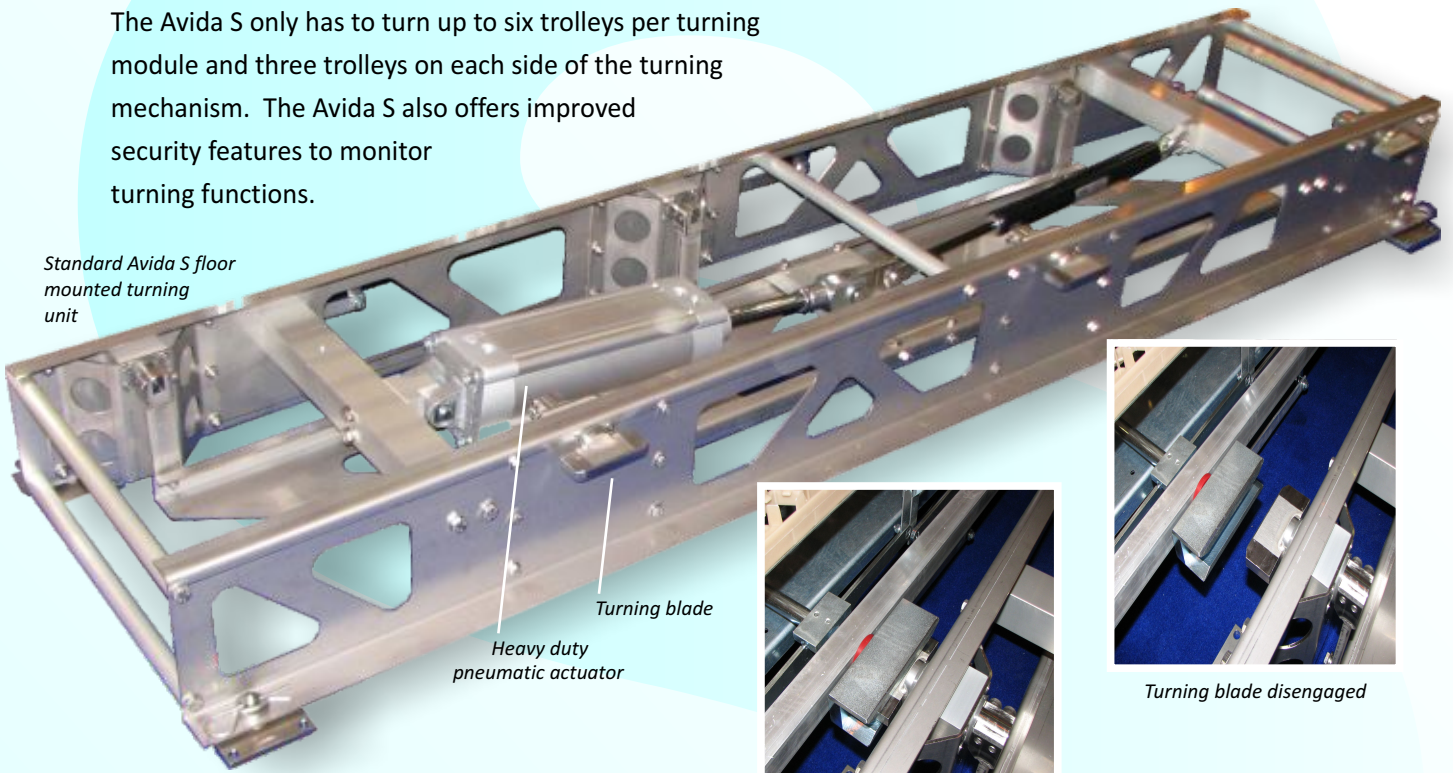

Avida S

*SAME Great Setter,
NEW Turning System
Option*

The Avida S is a new member to the Avida single stage setter series.

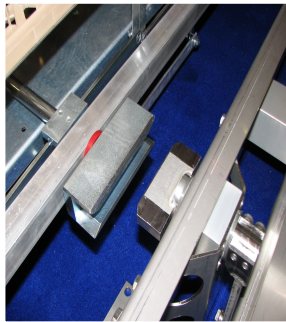

Already proven in hatcheries around the world to be the best single stage setter, the Avida S series option incorporates a new turning system. The new floor mounted turning module is a reliable pneumatic unit placed in each section of the setter. Connecting to the trolleys is quick and easy. By removing a few pins, the complete turning unit can be removed for cleaning and maintenance.

The Avida S only has to turn up to six trolleys per turning module and three trolleys on each side of the turning mechanism. The Avida S also offers improved security features to monitor turning functions.

Turning blade engaged

Avida S series A125-82 single stage setter showing clear, unobstructed, walls for ease of cleaning.

When using the Smith 150 egg tray, the Avida S offers customers using trolleys from other incubator manufacturers the possibility to use existing trolleys in the Avida S setter. The advantage is modular control for greater uniformity and superior airflow with air passing through only one trolley on each side of the fan. **The correct choice for those who want to produce superior product.**

For machine dimensions please see the standard Avida brochure and refer to the required capacity and tray type.
