## Climate Control Systems

Times have changed. It was always a hard business. Making a profit was not a given. Hard work and ensuring you got value for the money you spent were givens, not options. Now we're being asked for more chicks from less eggs. Better, more uniform, healthy chicks that survive and grow better. Genetics is important, but so is the environment.

Now you have an opportunity to create the environment you need without investing a fortune. **The CC3 is here.**

The CC3 is a compact unit capable of being installed on most roofs or even inside the very setter or hatcher room that it is caring for. Modular construction allows you to build the unit you need considering the variables of:

Compressor size ranging up to 20 tons to provide you with chilled water, chilled air and/or dehumidified air at a moment's notice;

Heating capacity that supports air temperature during cold spells, heats water for warming single stage setters or just washing away bacteria.

Heat recovery need which allows you to remove the animal heat from the fluids returning from the setters and hatchers and recycle that heat into your room or exhaust it to the atmosphere.

The saving of energy through reduction of the fluid temperature as it returns to your chilling compressor which helps you to "be green" and to reduce your skyrocketing electric bill

Yes, this unit can heat or cool incoming air, dehumidify and reheat that incoming air, provide chilled water to your incubation equipment, provide heated water to your incubation equipment and your hatchery in general, recover wasted heat to reduce your heating bill and extend the life of your current chillers by reducing the load they bear—and potentially save you from costly investments in piping systems and chiller upgrades or replacements.

**The CC3 is here.**

 **Chick Master**

# CC3<sup>RT</sup>

The amazing CC3 unit is capable of delivering hatchery ventilation, dehumidification, heat recovery, chilled water, and heated water. All of these functions in a compact, modular designed package that meets your needs today while having the ability to grow with you to face tomorrow. It is supplied fully tested, ready to install. Whether you are expanding, building a new addition or simply replacing worn rooftop units or chillers, the CC3 provides the answer you seek.
