

SETTER EXHAUST UPGRADE KIT

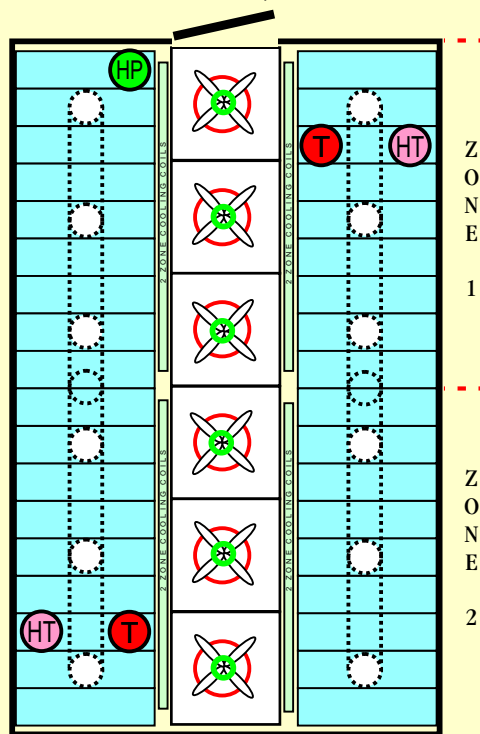

"...helping your incubators to breathe more easily"

C576-165 Classic Setter
Internal Layout

The Exhaust Upgrade Kit helps to revitalize older machines to the latest Chick Master design specification for improved performance and profitability

It is well known that eggs today are bigger and more fertile resulting in an increased heat load of up to 25% more than your older incubators were originally designed to process.

By adding an exhaust outlet over every three columns of eggs throughout the setter excess heat can be quickly exhausted to provide a more balanced and stable environment for improved efficiency and lower energy bills.

LEGEND

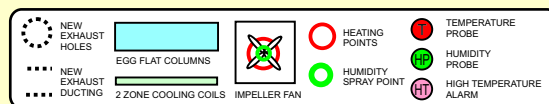

Diagram shows the internal schematic layout of a Classic 576 Setter upgraded with the **Exhaust Upgrade Kit** the **2 Zone Cooling Upgrade Kit** and the **Ventilation Upgrade Kit**.

Energy Saving

The **Exhaust Upgrade Kit** will give you significant savings on your energy bills as your machines will require significantly less cooling

Less embryonic stress

Reduced heat especially in the higher trays within the cabinet prevents embryonic stress improving hatchability and chick quality

Easy to install

The **Exhaust Upgrade Kit** is very easy to install by hatchery maintenance personnel. Full fitting instructions and tools are provided.

For more details please contact:

Chick Master:
Suite 335, 25 Rockwood Place, Englewood, New Jersey 07631, USA.
Phone: (201) 871-8810, Fax: (201) 871-8814, Email: sales@chickmaster.com

Chick Master UK:
Express Park, Bristol Road, Bridgwater, Somerset TA6 4RN, UK.
Phone: +44 (0) 1278 411000, Fax: +44 (0) 1278 451213, E-mail: sales@chickmasteruk.com

Please note: The hatchery exhaust ducting to the setters will need to be changed as the exhaust connection will be relocated. This will require additional ducting as it is not supplied in this kit.
