

GeMeric 2

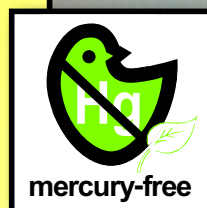

The New PLC Powered Option that Updates Most Types of Incubator Controls to Probe Based, Programmable, Technology, Without the Expense of Replacing Your Existing Control System

Features Include:

- **Advance Temperature Control:**
GeMeric 2 is programmed to control temperature using a PID loop or ON/OFF configuration. This flexibility allows customers to adapt the control to their specific needs
- **Cooling Options:**
The PLC allows for programming of up to 6 different cooling modes
- **Stage Programming:**
For Hatchers and Setters
- **Has Almost All The Functions of a Full Control:**
Geric 2 can control: Damper position, blower, turning, lights, alarms, turning counter
- **Full Connectivity:**
To Maestro and Advisor
- **Easy to Use Operator Panel:**
A membrane switch keyboard allows for easy access and navigation of the menus
- **Easy to install:**
No need to remove eggs from the setter
- **LED Indicator Lights:**
See at a distance the operational status of the setter or hatcher
- **Calibration Options:**
GeMeric 2 probes can be calibrated for optimal performance
- **Water Resistant PLC and Housing**

GeMeric 2 is a great solution for replacing mercury thermostats in setters and hatchers, GeMeric 2 opens the door for this system to be installed in almost every incubation system in the market. Since the upgrade is based on a palm-sized PLC, we only need to keep the circuit breakers, and other control components from the original control to gain access to the entire system. No more expensive custom boards with limited programming capacity. Maintenance is easy too. PLC's, when necessary, can be replaced quickly with preprogrammed units available from Chick Master.

Combine the GeMeric 2 with the Mercury Free Overtemp option to remove almost all mercury from the setter or hatcher.
