

The Break Glass System

IN CASE OF AN EMERGENCY

The Break Glass system gives you more assurance that your hatcher will do everything it can to protect your valuable chicks for as long as possible while it waits for your team to get there and fix whatever the problem may be.

Another innovation from Chick Master for hatcheries with Chick Master Ultra, Genesis II, Genesis III or Genesis IV controls.

Like having your very own "first response" team in place 24 hours a day.

Imagine a system that will, based on your direction, take any or all of the following actions whenever a high temperature situation continues beyond a predefined time in your hatcher:

- 1** Cut the power to the normally open valve to ensure cooling medium will flow as long as there is pressure;
- 2** Make changes to ensure that the heating circuits are off;
- 3** Turn on any available blowers to increase or maintain airflow;
- 4** Attempt to open any powered dampers;
- 5** Attempt to turn on any available humidity spraying units;
- 6** Attempt to increase fan speed to maximum potential speed;
- 7** Attempt to activate the hatcher's audible alarm system.

Completely free-standing system when purchased as an upgrade

This system can continue to function even if your main control malfunctions. Designed to deal with the demanding conditions of a hatchery.
