

Improved CVH Hatcher Fan Assembly

Increased airflow, more efficient water cooling, and reduced chick down build-up

Improvements:

- New high-efficiency 'corrugated' cooling coils create a turbulent water flow to improve heat transfer
- Off-set cooling coils positioned directly in the air path, eliminating air flow "shortcuts" and improving effectiveness
- Manifold design supplies a uniform temperature across the air path, eliminating hot spots in the air flow
- New Venturi 6-blade fan system increases air flow through the new coils while reducing electrical load and extending motor life

Available fully assembled (crated), non-sssembled (2 cartons), or as an economy upgrade kit (1 carton) using the electrical components from the old fan frame

Results:

- Reduce or eliminate high-temp alarms
- Less chick down to clean from fan frame
- High efficiency design reduces water usage and energy consumption
- **Cool and Comfortable** Chicks
