

Exhaust Upgrade Kit

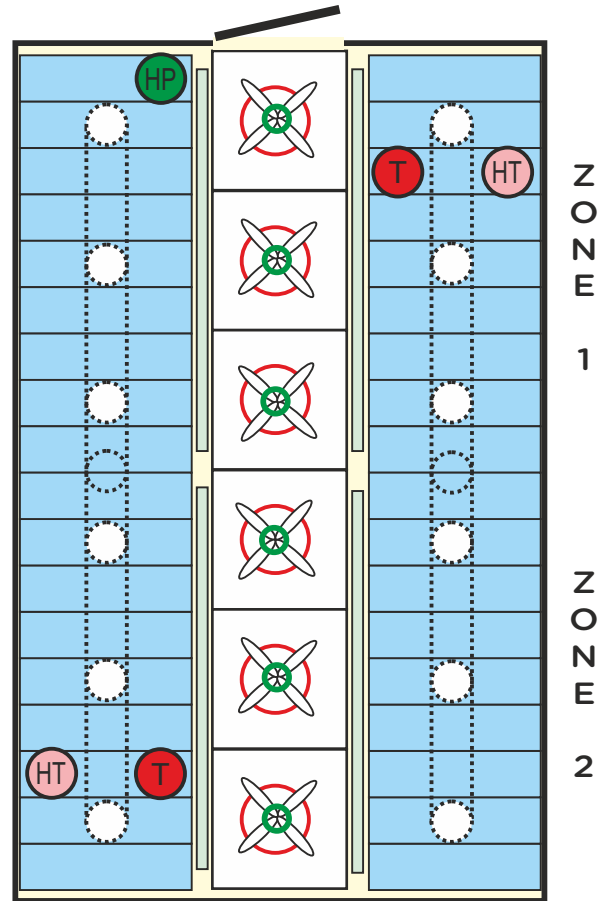

Revitalize older setters to the latest Chick Master design specification for improved performance and profitability

Today's bigger eggs have an increase heat load, up to 25% more than what older incubators can process. By adding an exhaust port over every three columns of eggs, the excess heat escapes and provides a more balanced and stable environment. The result is improved efficiency and incubators that breathe easier.

- Reduced heat, especially in the higher trays within the cabinet, prevents embryonic stress, improving hatchability and chick quality
- Easy to install by hatchery maintenance personnel
- Full fitting instructions and tools provided

"Helping your incubators to breathe more easily"

Internal schematic layout of a Classic 576 Setter upgraded with the Exhaust Upgrade Kit, the 2 Zone Cooling Upgrade Kit and the Ventilation Upgrade Kit

Please note: The hatchery exhaust ducting to the setters will need to be changed as the exhaust connection will be relocated. This will require additional ducting as it is not supplied in this kit.
