

# GeMeric 2

The new PLC powered option that updates most types of incubator controls to probe based, programmable technology, without the expense of replacing your existing control system.

GeMeric 2 is a great solution for replacing mercury thermostats in setters and hatchers and can be installed in almost every incubation system on the market. Since the upgrade is based on a palm-sized PLC, we only need to keep the circuit breakers and other control components from the original control to gain access to the entire system. No more expensive custom boards with limited programming capacity.

- Water resistant PLC and housing
- Stage programming for setters and hatchers
- Advanced temperature control with 6 cooling modes
- Controls damper position, blower, turning, lights, alarms and turning counter
- Full connectivity to **Maestro** and **Advisor**
- Easy to use operator panel
- Simple installation without the need to remove eggs from the incubators
- LED indicator lights to see operational status at a distance
