

# Genesis IV

The most advanced incubation control on the market. Powered by a PLC and true PID algorithms, it efficiently manages temperature and humidity to optimize machine performance and hatchability. Featuring a color touch-screen interface for intuitive, easy control, with Allen-Bradley or Omron components.

- Genesis IV Control is characterized by its ease and simplicity of operation. All touch screen incubator control functions are represented by easily understood symbols.
- The touch-enabled LCD screens allow instant access to all parameters, alarm programs and functions of the setters or hatchers.
- For security reasons, all access to critical operations and controls is password protected allowing access only to those persons authorized to make such changes.
- A flashing visual indicator is activated when machines are in a state of alarm.

**Chick Master can update almost any incubation system to the Genesis IV Control system**
