

Get Rockin'

Symphony
AVIDA

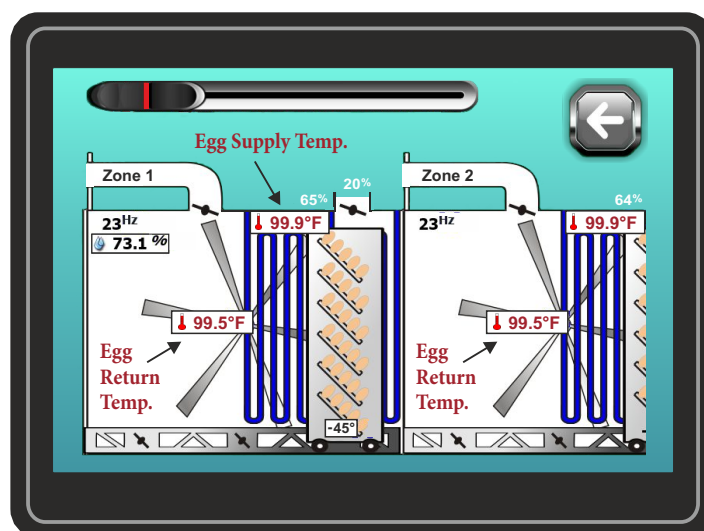

WITH OUR BEST INCUBATION CONTROL EVER

We are pleased to introduce the **ROCK Control**. We wanted to shake things up when it comes to managing single-stage setters and hatchers, and this new control is going to rock you! It is simpler to operate with more consistent control of the incubator environment with excellent results to prove it.

KEY FEATURES AND BENEFITS:

- ROCK measures the temperature of the egg mass and then maintains a consistent differential between the setter and hatcher operating temperatures and that of the eggs. The result is a more stable environment and constant temperature control that uses less energy.
- Self-adjusting variable frequency drives on the fans automatically adjust the fan speed to match the needs of the embryo throughout the incubation cycle. Less energy and better chicks.
- Modulating cooling valves that open to get just the right cooling when needed. PID function allows the incubator to get to the desired temperature with no overshoot. You get a more stable incubator and consume less water and energy with better and more chicks.
- Mounted in the center panel, the ROCK is easily accessible and easier to maintain.
- CE & UL compliant to meet international electrical standards.
- Option to use stage programs with up to 20 steps.
- Bigger color screen with touch and slide features.

Learn more about how the Avida Symphony with ROCK controls can put your *Hatchery in Harmony*. Long live ROCK!
