

Two Zone (split) Cooling Upgrade Kit

The Two Zone Cooling Upgrade Kit consists of two highly efficient copper cooling coils split into individually controlled sections. Once installed, the result is increased hatchability and significant energy savings. When installed in conjunction with the Chick Master Exhaust Upgrade Kit, you can realize your return on investment within a single year.

- After the setter recovers from the cooling effect of a new set of eggs, the heating hardly ever comes on again resulting in lower energy costs
- Trials have shown that setter temperatures remain within 0.2 °F (0.1°C) of set point resulting in a stable temperature throughout the entire egg mass
- Less fluctuation in heating and cooling resulting in less stress for the developing embryos
- Improved internal temperature balance reduces the energy consumption of the setter overall
- Shorter cooling coils with heat diffusers reduce water use and the load on the water chiller
